

Report about work on Biolaz-Oberon 11-S
Ukraine Kyiv 2009

Medical Center Alliance-D

Medical Center “Alliance-D” works with diagnostic device Biolaz-Oberon 11-S since 2002 year . We have extensive experience in working with patients of different age groups and associated pathological processes in various stages of the disease.

Non-invasive diagnosis allows for an individual approach to each patient, which allows us to estimate the state at the moment in a short period of time in identifying the most urgent problems, to determine the cause of this condition, take into account the level of concern gomotoksicosis authorities and monitor the situation to continue treatment.

In traditional medicine for the level of such survey is necessary the diagnostic center. The volume of time it will take at least 2-3 days, will not be considered the most active issue in the body and appointed by each regimen for treatment of specialist, without concomitant diseases and individual susceptibility of the drugs and their dosages.

In our medical center surveyed a lot of patients. Take into account the pathology in the acute stage, unstable remission.
